```
s = "abcd"  
b = s + "ef"  
print(s)
```

- abcdef
 - abcd**
 - Error
 - None of the above
-

What will be the output of the following code?

```
s = "abcd"  
b = s + 2  
print(b)
```

abcd2
abcd

Error

None of the above

What will be the output of the following code?

```
s = "abcdef"  
print (s[2:])
```

bcdef

cdef

abcdef

None of the above

What will be the output of the following code?

```
s = "abcdef"  
print (s[4:2:-1])
```

edc

ed

bcd

None of the above

What will be the output of the following code?

```
a = "abcdef" == "abcd"  
print(a)
```

False

True

Error

None of the above

What will be the output of the following code?

```
a = "abcdef" >= "abcd"
```

```
print(a)
```

False

True

Error

None of the above
